PHARMACOLOGICALLY ACTIVE POLYPEPTIDE GLYCOCONJUGATES
SPECIFICATION

5 The growing awareness with regard to the mechanisms of function and regulation of the immunological system have raised, in the last years, the possibility of therapeutically modulating its function.

10 The great diversity of substances of different origin, natural and synthetic, capable of modulating some immunological mechanisms is due partly to the enormous possibility of recognizing substances which are foreign to the organism that is its own. In (GH Werner, P Follés " Immunostimulating agents : what next?. A review of their present and potential medical applications." Eur. J. Biochem 242, 1-19 (1996)) some of the products of recent development are described, as well as their
15 possible therapeutical implications.

From among the various endogenous mediators there is one which raises one of the most important therapeutical challenges, it is the tumor necrosis factor (TNF). This molecule shows some special distinct characteristics (R
